

VUELIVE Remote

VUELIVE Remote is a versatile solution that gives enterprises or individuals the ability to broadcast high-quality LIVE video content to and from remote locations in either one or two-way communications. By using a video camera and a laptop, field personnel can transmit and receive LIVE video/audio over a wireless network or low bandwidth Internet connection.

In a one-way communications configuration, **VUELIVE Remote** delivers high-quality LIVE video from remote locations to a broadcast studio without the need for field vehicles loaded with expensive transmission equipment. A field reporter captures content for use in a broadcast with a camera and a laptop and transmits using a wireless connection. The audio/video stream is received at a workstation in the broadcast studio and converted to SD-SDI output via a PCIe card.

Without the need for expensive transmission trucks, news agencies can:

- Decrease initial capital investment requirements
- Decrease maintenance and technology costs
- Increase the number of field videographers and valuable video content gathering
- Increase responsiveness to breaking news events

In a two-way communications configuration, **VUELIVE Remote** delivers LIVE, interactive video content to and from any PC over a cellular network or low-bandwidth Internet connection. The content can be sent to maintenance crews or experts in their field such as engineers, doctors, and mechanics for a variety of needs.

- **Cost** - it's more cost effective than being there in-person
- **Location Restrictions** - content is unreachable or so remote that traveling to the location is not an option (inside underground pipes and wells)
- **Time Sensitivity** - situation is so time sensitive that immediate review in-person is not possible (medical emergencies, security)

Our patented core technology, Lightning Strike™ (LSVX), is a video encoder/decoder (codec) that is considered one of the best in the world for delivering high quality video at very low bandwidths.

VUELIVE Remote

VUELIVE Remote Features:

Setup

- Full Windows XP®, Vista® or Windows 7; IE or Firefox support
- Full Mac Safari, Leopard or Snow Leopard support
- Hosted solution available as Software-as-a-Service (SaaS)
- Wide range of cameras supported

Collaboration

- Integrated audio (VoIP)
- One or two presentation windows for multiple camera feeds and Desktop Sharing to viewers
- Broadcast for up to 100,000 viewers
- Broadcast Recording & Posting to archive (future)

Video Controls

- Customizable video parameters (resolution, frame rate, bit rate, quality)
- Video Compression ratios of 40:1 to 150:1
- Customizable Frame Rates from 15 to 30 fps
- Customizable Bit Rates from 100 kbps to 3000 kbps
- Video Resolution supported: up to 720x480

User Access and User Groups

- User Accounts managed by Administrator

Support

- Online issue reporting and resolution
- Automated system check utility
- Email supportw
- Automatic Bandwidth and Network monitoring

Relax with VUELIVE Service Network Features!

All features and network services are managed on the VUELIVE service network, removing the burden of content deployment, resource maintenance, network scaling and security management.
